LETTER OF INTENT

My name is Robert Cozzarelli, AIA and I have been a practicing architect since 1986. I have over 39 years of experience in the architectural design profession and building industry. During my professional career I have seen many different and unique products come and go, but since I was introduced to the Verified ProSafety, Inc. Specialty Concrete Systems it immediately caught my interest because of its pure strength of material, simplicity and freedom from intricacy and complexity as a building material.

My initial thought was how simple this product will adapt to construction, means, methods, techniques and sequences of use by the system applicator/builder. Also how “green” the system is and its obvious compatibility with all other building materials. Clearly, in my professional opinion, the innovation of this product has the potential to revolutionize the construction industry finish systems because of its versatility, cost, fire resistance, aesthetic capability and overall ease of application and speed of installation. Additionally, minimal certification training will be required by the contractor to install the finished product.

The Verified ProSafety, Inc. Specialty Concrete Systems can be used in all construction types to enhance final finishes by creating a richer appearance with depth and character. Furthermore, I can not see how this product will create excessive budget increases because of its composition. I firmly believe that when tested as a code compliant based product that it has met all ASTM standards for its intended use and it will easily contribute to the architectural elements of the finishes and the overall building environment that it will enhance. The flexibility of the product is endless and it has the capability to bridge residential, commercial and industrial applications.

I truly believe that the Verified ProSafety, Inc. Specialty Concrete System will be a product that architects will embrace because it will provide the design professionals creative freedom within their design budget while using it in a diversity of applications.

With confidence, excitement and enthusiasm I anticipate the design profession specifying Verified ProSafety, Inc Specialty concrete Systems throughout the world.

Sincerely,

Robert Cozzarelli, AIA

Robert Cozzarelli, AIA, NCARB, PP, CID
